Index of Specimens, with case and shelf location.
The "Remarks Path" appertain to the specimen of
that number in the Pathological Section.

The disposition of specimens not now in the
Museum is shown by such statements as McGill
University, Discarded, &c. For further informa-
tion, see the cards.

~~Under Comparative Anatology, where
it says "no card", there is no specimen
in the Museum. What became of the
specimens so noted, cannot now be
stated.~~

Negatives

8040-2, 8086, 96,

8105.

Miss Evelyn Grossbeeck Mitchell, A. B., M. S., is a young New Jersey girl, who has spent several years in Washington. She has a girlish face and form, soft brown eyes, and is about as far removed in appearance from the popular idea of a scientist as one could imagine, yet she is the author of a valuable and interesting book that bears this formidable title:

"Mosquitoes—The Habits and Life Cycles of the Known Mosquitoes of the United States; Methods for their Control; and Keys for Easy Identification of the Species in their Various Stages. An Account Based on the Investigations of the Late James William Dupree, Surgeon General of Louisiana, and Upon Original Observations By the Writer."

With recent years, so much has been written about mosquitoes, in books and periodicals, that any one interested in them feels the need of a single work, containing, in a compact form, as does this volume which has just appeared under the Putnam imprint, the essential facts, so far as science knows them, in regard to these dangerous and troublesome creatures. It is to meet the demands of the constantly increasing number of both professional and lay workers, that the present volume is designed. While aiming to keep it within reasonable bounds, that it may be used for work in the field and in the laboratory, no portion of the subject has been slighted, or fundamental information omitted, in the endeavor to carry this plan into effect. Not the least valuable portion of the book is that which gives practical instructions for ridding a neighborhood of these pest-bearing and joy-killing insects.
